

Heat. Dry. Cool.

The Komline-Sanderson Paddle Dryer/Processor transfers heat into or from a slurry, paste, cake or powder... to heat, dry, cool, sterilize or react.

With highly efficient indirect heat transfer, energy consumption is lower. Dual counter-rotating shafts with unique intermeshing wedge shaped paddles produce uniform mixing and optimize heat transfer. The use of hollow paddles for heat transfer results in a compact machine.

- Process slurry, paste, cake or powder
- Indirectly heated or cooled
- Continuous operation
- Heat transfer media: steam, thermal fluids, water, glycol
- Heat transfer areas from 30 to more than 3300 sq. ft. per unit
